

Empowering Law Enforcement with ShadowTrak

The Precise, Passive tactical Phone Locator

BOURA CYBER introduces ShadowTrak - The Passive Phone Locator, a discreet, compact device that leverages AI and Machine learning technology to silently and effectively track and pinpoint cell phones within a 2-kilometer radius.

The ShadowTrak Locator stands out from other systems by using a compact tactical unit, avoiding interference caused by active systems, and avoiding the exposure and risk involved in broadcasting.

ShadowTrak utilizes AI algorithms to identify and track the changing token by passively analyzing the communication within the existing cellular network activity.

It simply requires inputting the target's phone number and being in his vicinity.

It works on all phones, networks, and technologies, including 5G SA!

This versatile tool can be deployed in various scenarios, whether in a vehicle, on a motorbike, or by a pedestrian. Its functionality extends to indoor and outdoor environments, and it is designed for ease of use, even by individuals without specialized training.
